

POLFLAM® produces fire-resistant glass for internal and external applications.

POLFLAM fire-resistant glass is used in the following applications:

partitions · frameless butt-jointed partitions · windows and doors · façades · roofs · smoke barriers

POLFLAM fire-resistant glass can be installed in various tested and certified framing systems:

aluminium systems · steel systems · timber systems

For additional functional properties, POLFLAM fire-resistant glass can be also combined with the following glass products:

low emissivity glass · solar control glass · sound control glass · laminated safety glass
anti-burglary and bulletproof glass · opaque glass · coloured and decorative glass
anti-reflective glass etc.
